

## § 2.4 - The Precise Def<sup>n</sup> of a Limit

In this video, we will:

- State the precise def<sup>n</sup> of a limit
- Try to understand what it means

Let  $f$  be <sup>a function</sup> defined on some open interval containing  $a$ , except possibly for  $a$  itself. Then the limit of  $f(x)$  as  $x$  approaches  $a$  is  $L$ , or

$$\lim_{x \rightarrow a} f(x) = L$$

if, for every number  $\varepsilon > 0$  there is a number  $\delta > 0$  such that if  $0 < |x - a| < \delta$ , then  $|f(x) - L| < \varepsilon$

W H D A

Limit exists at  $x=a$

Limit DNE at  $x=a$
